 Beltone

# Introducing custom hearing aids to the Beltone Amaze product family

Imagine all the Beltone Amaze technology you know, in a custom-made hearing aid. This new complete custom hearing solution combines excellent sound quality, superior streaming and connectivity options, remote fine-tuning in one discreet product, providing users with an amazing hearing experience.

We have even taken it a step further – our CIC hearing aids is the first CIC solution to have direct streaming functionality from smart devices and wireless accessories. Even from Android phones\*. No adapters or connectors needed. Now that's a custom hearing home run.

\* Only Android phones with Android version 10 and Bluetooth version 5.0

# Beltone Amaze

## Make every day amazing for your patients

### A hearing home run

Beltone Amaze is a complete premium hearing aid that offers your patients everything they need to experience a fuller, clearer, and richer sound. Your patients can tap into excellent connectivity for crystal-clear streaming and personalized control, and take advantage of rechargeability that frees them from batteries and keeps them going all day on a single charge.

Beltone Amaze is based on a new high-performance platform which underwent a complete redesign from previous generations. The result is truly amazing – the new platform has double the speed and memory, 30% more computing power, a new radio with up to 5 dB higher sensitivity for better Ear-to-Ear functionality, and is 25% more power efficient when streaming.

And with Beltone's complete Remote Care, which enables you to fine-tune patients' hearing aids remotely, you are now able to offer a level of care your patients simply cannot get anywhere else.

# Beltone Amaze

## A clearer, fuller and richer sound experience

Beltone Amaze brings a much broader range of sounds into the listening spectrum. Your patients can hear all of life's beautiful and delicate sounds, from a grandchild's exciting story, a quick joke in a busy restaurant to birds singing in the distance. They can experience more action, thrills or adventure when watching movies. And, for your patients who are music or theater lovers, Beltone Amaze embellishes live performances and makes these experiences deeper and more fulfilling.

## Layers of nuanced sound

Our industry-leading CrossLink Directionality 2 with Personal Sound ID paired with extended bandwidth (up to 9.5 kHz) offers your patients an unparalleled speech

recognition and provides more auditory cues and information for a richer and clearer listening experience. Conversations and ambient noise can now co-exist in a natural space. Additionally, the Impulse Noise Reduction in Beltone Amaze won't amplify sudden loud noises, so your patients can always rely on a comfortable hearing experience.

## Lusher, more textured music

Equipped with the highest dynamic range in the industry (up to 116 dB), Beltone Amaze can receive and process sound at the highest input without distorting it. This results in a more natural and textured musical experience for your patients.

# Amazingly rechargeable\*

## Make battery changes a thing of the past

Thanks to Beltone Amaze's integrated lithium-ion battery, your patients will no longer need to fiddle with

traditional batteries. Highly useful and conveniently portable charger will let your patients go on with confidence of a full day charge.

\* Only on select RIE models

# Empower your clients with the HearMax™ app

Beltone HearMax app is the most advanced app for hearing aid users. With a few simple taps on the **Quick Buttons**, users can adjust their hearing aid directly from their iPhone, iPad, iPod touch, Apple Watch or Android devices. No intermediate device or streamer is needed. It's an easy way to personalize the hearing

experience for your clients.

By encouraging them to use the app, you're empowering them to take control of their sound experience. Enabling your clients to be in control of their sound experience is a win-win for you and your clients.

## Amazingly personalized Beltone Remote Care

No one knows your clients better than you do. And you know that some of your patients may need extra time adjusting to their hearing aids. They just want to hear better – and they want it to be as comfortable as possible. Between the visits to your clinic, Beltone Remote Care makes it easier for your clients to adjust to new hearing aids and have a positive experience at all times.

### What is Beltone Remote Care?

Remote Care is a comprehensive remote fine-tuning service that you can provide for your clients. It allows your clients to request adjustments to their hearing aids from anywhere, between scheduled visits, simply by using the Beltone HearMax app.

Once you receive the request, you can review it and make adjustments to your patient's hearing aids when

it's convenient for you, using the Beltone Solus Max fitting software. Then you upload the adjustments straight back to your client's HearMax app. All your patient has to do is click to accept and install the adjustments on their phone.

For Hearing Care Professionals who have used Beltone Remote Care for remote fine-tunings, the value is clear. The comprehensive Beltone Remote Care helps deliver a better user experience and enables an extra level of support and service.\*

**94%** of dispensers believe Beltone Remote Care service helps their clients get a better hearing experience.

**87%** of dispensers believe Beltone Remote Care service enables them to deliver the best fit within a shorter time frame.

**Curvilinear Rapid**

The WARP Curvilinear Rapid sound processor models auditory frequency resolution by spacing the highly overlapping bands more closely at lower frequencies and further apart at higher frequencies.

The hearing instrument mimics the human ear while processing sound, resulting in a more natural sound quality.

**Feedback Eraser**

Feedback Eraser analyses and models the incoming sound and uses this information to prevent the feedback cancellation filters from attacking desired sounds, without creating disturbing sound quality artefacts, resulting in up to 15 dB of extra gain available.

Exceptional, full and clear sound without the unwanted and unnatural feedback, which can occur from amplification or digital sound processing, even during phone calls and while listening to music.

**Sound Cleaner Pro**

The Sound Cleaner Pro system uses spectral subtraction, one of the most widely used methods for enhancement of speech in noise. Spectral subtraction precisely identifies speech and characterizes noise and then subtracts the short-term noise spectrum from the total signal, leaving only the speech portion.

Sound Cleaner Pro improves comfort in noisy listening situations without compromising speech understanding.

**Adaptive Directionality**

Adaptive Directionality with Smart Beam Steering automatically adjusts the directional beam width (Wide, Medium, Narrow) based on the relative levels of inputs to the front and rear microphones. With Smart Beam adaptive directionality you set the beam width to either Wide, Medium or Narrow.

Adaptive Directionality creates an effect of zooming in on the speakers directly in front of the listener, and zooming out when the listener is surrounded by many speakers, resulting in improved speech to noise ratio and thus better speech understanding.

**Speech Spotter Pro**

Speech Spotter Pro uses knowledge about directional preferences along with acoustic analysis of the listening environment to control whether the hearing aid processes sound in an omnidirectional or directional mode, using slower and more comfortable transitions than Smart Beam Adaptive Directionality.

Speech Spotter Pro results in improved speech understanding in different situations and optimal sound quality in a comfortable way.

**Spatial Directionality**

Spatial Directionality provides the listener with the benefits of both omnidirectional and directional modes simultaneously. The omnidirectional pattern is applied to one ear, the "monitor ear" and the fixed directional pattern is selected for the other ear, the "focus ear".

More environmental sound awareness and improved speech understanding. No need for manual or automatic switching between different directional programs.

**Adjustable Mixing-point Frequency**

Band-split directionality processes low frequency sounds in an omnidirectional pattern, while high frequency sounds are treated as a directional response. The blending point or optimized frequency at which the processing changes between omnidirectional and directional, is automatically calculated by Solus Max, but can be adjusted in each program.

Provides distortion-free sound quality, optimizing the mix of spatial awareness and speech understanding based on the individual hearing loss and instrument model.

**CrossLink Directionality**

CrossLink Directionality enables the hearing instruments to dynamically adjust microphone settings and choose the optimal directional pattern to suit any environment, by binaurally analyzing the acoustic environment continuously and applying an omnidirectional pattern to one ear, and a directional pattern to the contralateral ear.

Users are provided with the information they need to instinctively react and tune in to the sound they are interested in.

**CrossLink Directionality 2**

Continuous ear-to-ear exchange of data about the environment optimizes polar patterns and microphone settings in any listening situation.

Providing the brain with the right information from both ears lets clients effortlessly follow conversations and shift attention naturally.

**Personal Sound ID**

With a combination of pinna restoration, binaural compression and a dynamic optimization of directionality settings, the hearing aids continuously exchange data to select the best directional response for any listening environment, while improving localization of environmental sounds.

Personal Sound ID delivers vivid spatial awareness, localization and speech understanding and lets users, not hearing aids, naturally decide what to listen to, without losing the sense of what is going on around them. It means they create their very own Personal Sound ID.

**Wind Noise Reduction**

Wind Noise Reduction reduces gain to the continuously updated level of environment sound, without wind noise. This approach helps preserve audibility for desired sounds and natural sound quality.

The hearing aid user has a very natural sounding experience, with soft wind noise in the background and preserved audibility for other sounds in the environment.

**Sound Shifter**

High-frequency sounds that are not audible due to high-frequency losses or cochlear dead regions are compressed into a smaller area of the sound spectrum where these sounds can be more easily heard.

Improves the audibility of speech cues that would otherwise have been lost, while maintaining the best sound quality possible.

**Asymmetrical Phone Handling**

The AutoPhone function detects when the user holds a phone to their ear, while Asymmetrical Phone Handling then uses wireless communication to adjust settings in both instruments. On the phone ear, the user will experience vocal quality and clarity, while on the opposite ear, the volume will decrease automatically, without blocking out other sounds.

Gives hearing aid users easier and more comfortable phone use, so they can still fully focus on their phone conversations and still be aware of what's going on around them.

**AFX Music Mode**

AFX Music Mode analyses the sound input over a longer period of time than any other Feedback Eraser setting, resulting in better accuracy in distinguishing true feedback from other tonal input sounds.

With Feedback Eraser, hearing aid users can enjoy extra comfort, better audibility and all the subtle nuances of rich sound, even in the most challenging situations. On top of that AFX Music Mode gives a clearer, richer, distortion-free music experience.

**Synchronized Satisfy**

Synchronized Satisfy gradually applies gain over a chosen period of time, to reach final target fittings. The 2.4 GHz wireless connection ensures that the adaptation process is coordinated between the client's two hearing instruments.

Allows the user to gradually and comfortably adjust to the new hearing instruments.

**Smart Gain Pro**

The hearing aids work together to analyze and accurately classify the listening environment, automatically adjusting gain and noise reduction settings across 7 different listening environments.

Hearing aid users can enjoy optimal audibility and listening comfort, even when moving through rapidly changing sound environments.

**Tinnitus Breaker Pro with Nature Sounds**

Built-in Tinnitus Breaker Pro, which consists of either fully flexible modulated white noise or the option of several water-inspired Nature Sounds, to help manage a client's tinnitus.

Helps break the 'vicious cycle' and win some relief from tinnitus by diverting attention away from tinnitus. It can be used a component of sound therapy or, simply as a masker to temporarily lessen the perception of the tinnitus.

# Connectivity

## Beltone Wireless Accessories

**Phone Link 2**  
Stream phone conversations and stereo sound from a Bluetooth enabled phone directly to the hearing instruments.

**Remote Control 2**  
Adjust volume monaurally and binaurally, mute hearing aids, change programs or switch between TV, radio, computer, etc.

**TV Link 2**  
Stream sound from TV, computer, stereo or other audio devices directly to hearing instruments.

**Remote Control**  
Adjust volume binaurally and change hearing aid programs.

**myPAL Pro**  
Significantly improves SNR in noisy situations, hearing range of 25 meters (82 feet), doubles as a table microphone, connects with loop and FM systems and streams audio from a computer or music player.

**myPAL Micro**  
Significantly improves SNR in noisy situations, delivers exceptional speech understanding, and extends hearing by up to 25 meters (82 feet).

## Beltone Apps & Connectivity

Made for iPhone | iPad | iPod

**Direct Audio Streaming**

Made for Apple hearing aids connect to iPhone, iPad or iPod with no additional hardware to stream movies, music and phone calls directly. With Beltone Amaze patients can even stream directly to Android phones\*\*.

Download on the App Store | GET IT ON Google Play

**Beltone HearMax app**

The most advanced of its kind. Everything you need for a full control of your hearing aids, including noise and wind noise reduction and full Beltone Remote Care fine-tuning

Download on the App Store | GET IT ON Google Play

**Beltone HearPlus app**

Fine-tune hearing aid settings directly from your smart phone. Create favorite programs, find lost hearing aids, control your Beltone Direct wireless accessories

Download on the App Store | GET IT ON Google Play

**Beltone SmartRemote app**

Adjust volume and change programs, control your Beltone Direct wireless accessories from your smart phone, through the Phone Link 2.

Download on the App Store | GET IT ON Google Play

**Beltone Tinnitus Calmer app**

Multisensory Tinnitus app that combines a variety of sounds, including customised and dynamic soundscapes and guided relaxation exercises to help divert attention away from tinnitus.
