Halo iQ

Made for a happy, healthy life

Hearing loss isn't just an ear issue,
it's a quality of life and health issue.

It can occur for natural reasons, but
other causes might surprise you.

Older adults*

with impaired hearing may have a
shorter lifespan than their peers
without hearing problems.¹

*70 years and older

People* with a hearing loss experience a
30-40% faster decline in cognitive abilities
compared to peers without hearing loss.²

*75 years and older

People with low-frequency
hearing loss are considered **at risk**
for cardiovascular events.³

Adults* with untreated hearing loss

were more likely to report
depression, anxiety and
paranoia than peers who
wore hearing aids.⁴

*50 years and older

Adults with untreated hearing loss
are more likely to develop dementia.⁶

There is a significant
association between
**high blood
pressure**
and untreated
hearing loss.⁷

People with
mild hearing loss
**are 3x
more likely**
to have a history
of falling.⁸

90-95%

of people with **hearing loss** can
be treated with hearing aids.⁹

Halo iQ hearing aids are made so people
with hearing loss won't have to miss a single
sound that brings them joy. They are made
knowing people who hear better, live better.

*Simply put, Halo iQ hearing
aids are made for the speed of life.*
